UTAH COPPERS ARE MAKING HISTORY

Utah Copper, Boston Con., Utah Con., Newhouse and Yampa on Top.

ALL CAN PRODUCE METAL VERY CHEAPLY

Yampa Improvements Elevate This Company Into Utah's List of Honor.

During the coming week the Yampa company will have ready for operation a new compressor, which is expected to create an immense amount of interest in Ohio Cop Utah mining circles. This compressor is the second of its kind to be placed in commission in the United States, the first being in the Pennsylvania tunnel in New York. General Manager C. W. Saxman stated Saturday that this compressor is a direct-connected electrical affair, which provides a splendid pressure with the application of a very limited amount of power. The management should be ready to place this new piece of machinery into action by the oth, and local circles will keep an interested eye on its performance. Since the East has so far recognized Utah copper mines as deserving of first place in the carning columns from now on, even to the exclusion of the old stand-by, Butte, it would not be out of place to remember that the Yampa company is in a position now to be lined up with the Utah Copper, Boston Consolidated. All these five properties are so situated that they will easily be able to record a fine earning with 14 or 15-cent copper. All have unlimited tonnages of copper cres blocked out, though but a portion of their territory has been explored.

The Utah Copper company has its own concentrating plant at Garfield, with is the second of its kind to be placed

been explored.

The Utab Copper company has its own concentrating plant at Garfield, with the Garfield smelter close at hand. The Boston* Consolidated company is similarly situated. The Newhouse company during last December produced over a million pounds of copper at a cost of 6 cents a pound. This company has a contract with the Garfield smelter. The Utab Consolidated ores are smelting ores, and require no preliminary trealment before making them acceptable for the furnaces. This company has its contract now with the copper smelter contract now with the copper smelter

contract now with the copper smelter at Garfield.

The Yampa, however, has no concentrating plant, nor does it need one. It has its own smelter, and with the improvements now under process of installation this organization will be in a position to handle 1000 tons of copper ore daily, and at a production cost not to exceed 8 or 9 cents per pound. The fact that coal and coke cost more to the Yampa than to other companies in Hingham is owing to the lack of railroad competition to the company's mine and smelter and its general location up the Bingham canyon. This company likewise is installing its own converting plant, and has just placed in commission its new tramway. This latter accessory is now bringing to the smelter all the ore it requires, some

MORNING SALES.

Lower Mammoth, 100 at 67c; 100 at 66c; 100 at 65c; 100 at 64c; 400 at 65c; 300 at 62c; 400 at 65c; 100 at 52c at 65c; 100 at 65c; latter accessory is now bringing to the smelter all the ore it requires, some thing like 600 or 700 tons daily, and easily can provide the plant with increased tonange following the increase in the smelting capacity.

So the mines that have all the necessary facilities to produce copper in Utah at a low cost, and at a splendid profit in spite of 14 or 15-cent copper, are the Utah Copper, Boston Consolidated, Newhouse, Utah Consolidated and the Yampa.

UNITED STATES LEAD FURNACES TO CLOSE

The United States Smelling, Reining and Mining company so those state who have been at the plant, has just about fifteen days' supply of ores on hand, at the end of which there will be nothing left for the company to do but to close down its lead furnaces. The fires already have been pulled from the copper furnaces, and by degrees the company has been letting its office force go until there is only a mere skeleton of the husy staff now left in the Dooly block offices.

staff now left in the Dooly block offices.

When in running order, as it has been for the past few scasons, the United States company has taken from its customers, or from its customers and its own mines, sufficient ore to place on an average of \$18,000,000 to \$20,000,000 in circulation in Utah. Mucle of this money came direct to Salt Lake City, and much of it found its way through the dividend channel to the merchante of this city. The sult brought by the farmers is responsible for the closing down of this plant. By this suit other plants have been forced to close down cuiting off from \$30,000,000 to \$10,000,000 cach year that had been finding its way into the channels of local trade.

KEWANOS STRIKE IS OPENING UP STRONG

Fresident H. H. Clark on Saturday resceived additional news from the mine management of the Kewanos property at Goldfield that tends to establish only more firmly the fact that this company has encountered the continuation of the faminis Mohawk ledge. This ledge on the Kewanos is over 100 feet in width and carried ore all the way from the surface, only in a very low grade manner. The extent of the ore on the 100-foot level of the Kewanos, states Mr. Clark, in now unknown, but it is making into a splendid body of \$100 rock or better. The Kewanos is separated from the Mohawk by the property of the former Laguma company, how a part of the Goldineld Comsolidated company. On the Mohawk the ore was encountered at a vertical depth on this ledge of \$20 feet. As the ore body has moved toward the Laguma to the form the step of the former strong it began working its way to a gradually speaker depth, so that on the latter group it was found at close to the 30 feeth. This downward endemny still continues, for the Kewanos management had to go to the 400-foot level before striking the ore. Now Mr. Clark is positive that the future of this company is assured, and that the Kewanos has another Mohawk with which to emisch stockholders and mining history.

JANUARY WAS GREAT

Secretary Callbreath of American Mining Congress Makes Strong Appeal: MONTH ON EXCHANGE

weeks, and while he was extremely anxious to leave for the East without an hour's delay, he was willing to remain in Salt Lake for a few hours if his presence here could be of any benefit to the Utah mining industry.

During the past two weeks Mr. Callbreath has attended numerous meetings, the most interesting being that at lielena, where the mining men of the State convened to put into being an independent smelting organization. This meeting was hardly intended as one for permanent organization purposes, as those who called it did not desire to ereate the impression that they represented the entire did not desire to create the impression that they represented the entire mining industry of Montana, but to their delight over 500 men attended this meeting, and so enthusiastic were those in aftendance that over a hundred thousand dollars was subscribed for an independent plant that day, with the certainty that a million and a half will be available at the next meeting scheduled to take piace in a short scheduled to take place in a short

Mr. Callbreath said: "This meeting and the sentiments expressed there were a revelation to every one. I had anticipated that there

expressed there were a revelation to every one. I had anticipated that there might be some hesitancy on the part of the mine operators to come right out in open meeting shd give voice to their complaints. But they did do so, and mean husiness. I found exactly the same sentiment in Seattle. Seattle will neet in March to take active steps toward protecting the mining industry of Alaska. The trust controls Alaska now, and the transportation facilities as well, and things are at such a stage that the smelting trust can say to a man in the far North: 'You self vour mine to me at my figures, or I will close you down.

"It is to remedy such conditions everywhere in the United States that the American Mining Congress was organized—to see that every mine owner gets a fair deal, a fair deal not only from the smelters, but from the transportation companies, the Government and every one else. The Congress desires to be a parent organization, protecting all State organizations such as you have here in Utah. But let me impress on the Utah Mine Operators' Association, the imperative fact that they must stand together right here at home. We all must hang together or we will hang separately. I can not make this point too strong. Conditions here in Utah are simply ideal for this State association, and it is sit salvation that the members work together.

"In Portland as well as Helena and

1000 at \$3c; 100 at 5c.

We have suffered more in Colorado than they have elsewhere, and for that rea-son we are especially adapted for work ing in harmony and for the good of all."

In speaking about the American In speaking about the American Mining Congress assisting the mine operator to properly smelt and market of the product of his mine, Mr. Calibreath stated that the purpose was to line up against the trust in every particular, including the establishment, if nor essary, of a metals selling agency just as the trust now employs to place its product in the channels of commerce. After the morning call on the local Stock and Mining Exchange, Mr. Call breath was introduced and made a happy speech in which he emphasized the present was introduced and made a day-py speech in which he emphasized the points above set out. He congratulated the members of the exchange upon the fact that they were conducting what is noted throughout the country as one is noted throughout the country as one of the most presperous and most honestly managed exchanges in all the jund. He asked that these conditions be remembered in the future, and for all to refuse to allow the mining industry to be called a gamble. It is one of the most powerful and legitimate industries in the world and it is deserving of more consideration at the hands of the members of the National Concress at Washington Hum it is now igress at Washington than it is nov

HONERINE STOCKHOLDERS WATCHING THE EAST

As the sale day for the delinement Honerine stock draws near, the tenth of this month being the this set, the minority stockholders are watching for some word from the East that will help push aside the clouds leng enough to enable them to bring order back to Honerine affairs. The proposition of the minority stockholders that the Bubl-Kimberley interests accept a basis of settlement actending over several months, during which installments will be paid until the total debt of \$150,000 or more is canceled, has been sout to President Baird, and his reply is expected within the coming few days.

If this proposition tails, it is very likely that these creditors will secure the property to the exclusion of the minority stockholders, and their holdings will be a total loss. It is thought that few, if any, sharps will be paid on by virtue of the last assessment, and it is protty certain that so soon after the financial panie, and in view of the report made by the minority mining expect who visited the mine, not enough will be forthcoming at the sale to reinburse the Bubl-Kimberley interests for their outlay for the company.

WHEELER NOW IS ESTABLISHED MINE

Manager Flindt Makes Very Favorable Report to the Local Officials.

ORES GO TO DEPTH AND OPEN UP BIG

Company Has No Fear of Smelters or of Low-Priced Metals.

With the positive assurance that the property of the Wheeler Gold Mines company near Verington has made good in a good, hig way, General Manager: Fred Firmit reached Salt Lake Saturday. Mr. Plindt, with his usual concar. All, Finall, with his ignal conservation, has never expressed in opinion of the Wheeler, deeming it time to
do so when he had opened up the mine
to such an extent that there could no
longer be don't as to the outcome of
development work. From the report
made to the Salt Lake officials of this
company yesterday, this time has arrived, and local stockholders are congrandating themselves at this happy
result of the company's efforts.
According to Mr. Finalt's report, the
Wheeler has mound up larger and rich-

result of the company's efforts.

Arcording to Mr. Flindt's report, the Wheeler has opened up larger and ticher than ever. The winze from the turnal level has demonstrated the vein at a vertical depth of about 260 feet to be richer and larger than had been anticipated at first, while the new upraise, or upraise No. 4, shows the ore vein to be longer than expected, and without any indications yet observable that the end has been gained. The body df gold ore averaging four feet in width has been opened now along its strike for over 120 feet, continuity at depth has been opened now along its strike for over 120 feet, continuity at depth has been opened now along its strike for over 120 feet, continuity at depth has been opened now along its strike for over 130 feet, continuity at depth has been opened now along its strike for over 140 feet, while the fourth apraise is disclosing ore carrying gold in the free state. After a thorough examination of the mine, Mr. Flindt has determined on doing a great deal of development work on the smaller ore bodies known to exist in the Wheeler, with the confidence that these will open up into paying one cluties.

Last mouth the company sold (we have of gold brillion, for which it received not the sum of \$3500. These bars are the result of operations in the new bill, a plant that is doing its work to the utmost satisfaction of those in charge. This mill is muning twenty-four hears a day, and gold bullion can be looked for steadily from sow on. The winter's amply of word is at the plant, while the water facilities have been arranged to the very lest advantage. The Wheeler is a Sait Lake proposition, and it is a proposition that can be a steady and gets rous earner without fear of mitrayomithe smelting contracts or lew priced metals. Its mill

out fear of unrayomble smelling con-tracts or low-priced melals. Its mill and the gold contents of the cres make its earning capacity a steady and inde-

FARMERS NEAR OGDEN OBJECT TO SMELTER

Same Old Trouble Feared Should Plant Be Built in That Vicinity.

It is not likely that a smelting organization will be formed to construct
a smelter at or near Ogden. It is understood that at the meeting Friday
evening at Ogden between the Utah
Mine Operators' association and the
business men of that city, there was a
disposition apparent on the part of the
farming element to fight such an enterprise. One visitor to Ogden stated Saturday that to build and operate near
that city would mean the same old fight
again between the smelters and the
farming element, and if any move is to
be taken it must be a move in the right
direction. direction.

"He pointed out that a mere 2000 acres of farming land surrounding Mur-ray is considered by the people as of more value to the State than smelting more value to the State than smelting plants that treat each year \$50,000,000 worth of ores. One farmer within eight or ten miles of the snielters can close them down. At Bingham, he states, cases of damage already are heing considered against the Yampa smelter, although the nearest ranch is eight or ten miles distant. The farmers already are trying to muster up a case against the Garfield smelter, distance being no hindrance to inclination. He points out that unless Toocle county is utilized for smelting purposes. ty is utilized for smolting purposes, there is no further room in Ulah for this industry. For in addition to desert land water is needed for purposes, and wherever there is water there is farming land.
